CEC Assignment 2

Note: Kindly submit your assignment till 21st November 2025 on the below drive link

<https://drive.google.com/drive/folders/1WYVusDeeSfxhAdsR2DKwSdE36dOQw43T?usp=sharing>

Please prepare a PDF file of your assignment, save it with your enrollment number as the file name, and upload it to the drive link shared above.

1. Open the Host Detail page and identify which host is running the FTP service check.
2. View the Service Status Summary and find out how many services are currently in a Warning or Critical state.
3. Check if the localhost is reachable using the check_ping plugin and record packet loss and latency.
4. Verify SSH service status using the check_ssh plugin.
5. Use check_http for a remote site like Google.
6. Verify DNS resolution using check_dns.
7. Demonstrate check_ftp, check_smtp, and check_pop.
8. Perform a DHCP test.
9. Use SNMP plugin to get system description.
10. Check CPU load with check_load.
11. Check disk usage for /home.
12. Find the most recent critical service alert.
13. List all hosts with “Warning” alerts today.
14. Schedule downtime for FTP service (45 mins).
15. Disable notifications for one host.

16. Enable active checks again for a disabled host.
17. View Availability Report (last 4 hours).
18. Display Performance Graph for HTTP service.
19. View Tactical Overview.
20. View the Notifications Report
